Diploma Paper 3 - Econometrics Classes - Mr Shaoran Li - Other Comments

very clear + good at explaining the classes could have been spread out across the term (to fit better with when the topic is covered in the lecture + to make the workload more sustainable through term)

V. good and a value add

I like the start where he talks about key themes/concepts in the problem set and how he draws attention to the most important things to know.

This class, like last term, is just too messy: why is there a need to fill every single space on the white screen instead of writing normally from top to bottom and left to right? The class is also not super useful, Apart from writing things on the board in an extremely disorganized way, it does not add anything to the typed solutions.

Brilliant supplement to the IIA lectures and to Dr. Kitov as well. I firmly believe Shaoran's approach to supos should be adopted across all subjects. I'd say I benefited from Shaoran's lectures more than the actual lectures this term.

The class is well organized and helpful.
